

Reproductive Health Commodity Logistics System (RHC LS)

Kachin State

Background of RHC LS in Kachin State

36 master trainers,
1,200 BHS from **16**
townships under
Kachin State received **RHC
LS training**

19 Participants received
**Automated LMIS for RH
commodities training** in
Kachin State

Activity	Total	When
TOT on RHC LS for 16 townships in Kachin State	36 Master Trainers	25-27 Oct 2017
Khaunglanphoo and Sautlaw townships didn't join RHC LS TOT training.		
Followed by Multiplier Trainings at 16 townships under Kachin State	1,062 BHS in 29 sessions	Nov-Dec 2017
Refresher Trainings on RHC LS in Putao and Machanbaw townships	73 BHS in 2 sessions	July-August 2018
State level Refresher Training on RHC LS in Myitkyina	45 Participants	July 2019
M&E visit on RHC LS in Myitkyina, Mogaung and Waingmaw Townships	16 BHS in 5 Health Facilities	July 2019
Refresher Trainings on RHC LS in Shwegu, Bhamo and Myitkyina Townships	145 BHS in 3 sessions	Aug-Oct 2019
Automated LMIS for RH commodities Trainings in Shwegu, Bhamo and Myitkyina Townships	19 Participants in 3 sessions	Sept-Nov 2019

Progress of RHC LS in Kachin State

- Trained BHS, TMO and SHD who know and practice RHC LS procedures and practice
- Well functioning of RHC LS (both paper-based and mSupply) in three townships – Myitkyina, Bhamo and Shwegu
- Practice on uploading of FSR reporting data in automated LMIS system (mSupply)
- Communicate between Townships and SHD for stock availability

Advantages

- Visibility of the stock status data through automated LMIS system (mSupply)
- Receive knowledge on inventory control system
- Increase awareness of stock availability in each township
- Stock reallocation/ transferring stock among health facilities and across townships
- Order the health products as 'need base', rather than 'break down'.
- Reduce burden for overstock and expired medicines

Challenges

- HR limitation
- Leadership role of State/Region and TMOs
- Monitoring for RHC LS activities
- Practice on reviewing of the stock data through Automation system
- Follow up action needed to improve stock adequacy
- Maintain optimal stock level in each facility
- Automation system- only set up in (5) townships till now
- Some townships – Conflict area

Way Forwards

- To strengthen the paper-based RHC LS in all townships
- To set up automated LMIS for RH/FP commodities in remaining townships
- To conduct regular M&E and joint M&E to township
- To follow the RHC LS procedures in resupply process (distribute the RH/FP products using PULL system)
- To increase practice on reviewing of stock status regularly
- Recommend to get the technical assistance continuously for RHC LS
