

Training Workshop on Clinical Research Management and Quality of Medical Information:

An Overview & Objectives

Dr. Hlaing Myat Thu

Deputy Director General

Department of Medical Research

DMR, Yangon, 10th March 2020

The Need for Research Management-Justification

- **Health Research** is an integral tool for National Health Development.
- **Management** becomes an important discipline and of great concern in every sector including Health research.
- **Health Research Management** is essential in organized Research institutions to make performance of the organizations efficient and effective.

Justification

- Research findings are considered as a research organization's key outputs.
- Thus research findings need to be strong and valid (quality results) and in-line with National health priorities
- Not only should the research findings be disseminated, another *challenge* for the health research manager is to **ensure the research findings/outputs are utilized**
- Health research institutions need a good research management training.

Functions

Research program managers need to perform four main functions:

- Research Policy Development
- Research Funding
- Managing Research Institutions
- Managing Research Programmes and Projects

Functions Continued

➔ **Data to Policy-** Policy-making may range from national health policies made by the government to clinical guidelines decided by health professionals.

Research Management includes-

1. Knowledge of National Health Research Policy and Programmes
2. Strategies related to prioritization of research areas
3. General Principles of Management
4. Research Quality, Leadership and Management Skill
5. Research Capacity Strengthening
6. Collaboration, Partnership and Research Networking
7. Research Funding and Financial Management
8. Research Monitoring and Evaluation, Translation of new knowledge into practice
9. Dissemination of Research Findings and Utilization
10. Knowledge of Health Research Information System and Myanmar Health Research Registry

Objectives of the Training Course

At the end of this workshop participants will be able to:

- gain knowledge on different aspects of clinical research management
- apply clinical research management principles in clinical practice
- carry out the registration of clinical research and clinical trials in Myanmar Health Research Registry (MHRR) website of Ministry of Health and Sports

Myanmar Health Research Registry

<https://www.mhrr-mohs.com>

- Publicly –available database of formally–approved health researches originated in Myanmar from year 2000 onwards
- Launched in 8th January 2018 (46th Myanmar Health Research Congress)

Evaluation Plan

This training course will be evaluated by:

- Group presentations
- Discussions, question and answer sessions
- Post evaluation form after attending the training course for comments and recommendations for future training courses including the structure of training module, view for lecturers, training materials etc.

Thank You

**Comments and questions would
be appreciated !**
