

# **Clinical Research Management and Quality of Medical Information**

## **Introduction**

Management became an important discipline and of great concern in every sector including clinical research. Clinical Research is a branch of health care science that determines the safety and effectiveness of medications, devices, diagnostic procedure and treatment regimens intended for human use. For enhancing health, lengthening life, and reducing the burdens of illness and disability, clinical research is vital. It is also important about the safety and effectiveness of drugs and other therapies. Clinical research requires complex and rigorous testing in collaboration with communities that are affected by the disease. As for clinical research, new challenges are becoming more and more defined. This makes a clinical research manager to assume the role of an interdependent facilitator of clinical research disciplines within the clinical trial research. Clinical research management is a growing field of qualified professionals who direct and conduct clinical trials research. For considering on such challenges for health research managers, this training will be prepared.

## **Aim:**

To improve clinical research management process and acquisition of research information

## **Objectives**

At the end of this workshop participants will be able to:

- (1) gain knowledge on different aspects of clinical research management
- (2) apply clinical research management principles in clinical practice
- (3) carry out the registration of clinical research and clinical trials in Myanmar Health Research Registry (MHRR) website of Ministry of Health and Sports
